

PATENT CLAIMS

1. The outstanding feature of the shaver SPR with the shaving foam container in a spray is that it is used for hair shaving with pressurised shaving foam.
2. The outstanding feature of the shaver SPR according to the patent claim 1 is that the protection cap involves holes and cross ribbing.
3. The outstanding feature of the shaver SPR according to the patent claim 2 is that the cutter block consists of one cutting edge, two side holes and cracks ending in front of the first cutting edge.
4. The outstanding feature of the shaver SPR according to the patent claim 2 is that the cutter block consists of two cutting edges, two side holes and cracks with ending in front of the second cutting edge.
5. The outstanding feature of the shaver SPR according to the patent claim 2 is that the cutter block consists of three cutting edges, four side holes and cracks with ending in front of the second and third cutting edge.
6. The outstanding feature of the shaver SPR according to the patent claims 3 to 5 is that the hollow duct is conducted through the cutter block and it passes to the cracks near the cutting edges.
7. The outstanding feature of the shaver SPR according to the patent claims 3 to 5 is that the rotary regulator for controlling the shaving foam flow is a part of the cutter block.

AMENDED CLAIMS

[received by the International Bureau on 04 July 2005 (04.07.05);
original claims 1-7 replaced by new claims 1-7 (1 page)]

1. Shaver SPR is a connected combination of the shaving foam spray (8) and cutter block (6) with turning regulator (3) the characterizing portion they form one unit.
2. Shaver SPR according to the claim 1 has the shaving foam spray with the outer area of package suitable for printing the advertising the characterizing portion it is exchangeable.
3. Shaver SPR according to the claim 1 closed side holes (10) the characterizing portion they are closed by the drifted position of the protection cap with the cross ribbons (9).
4. Shaver SPR uses firstly before shaving and secondly for shaving hair the characterizing portion for both ways using are common.
5. Shaver SPR according to the claim 4 for both ways to the of using produces the shaving foam from shaving foam spray the characterizing portion for both ways using is common.
6. Shaver SPR according to the claim 5 with the drifted of the protection cap with the cross ribbons appplayes the shaving foam on the wet face the characterizing portion appplaying on face before shaving.
7. Shaver SPR according to the claim 5 without the protection cap with the cross ribbons appplaying the shaving foam the characterizing portion appplaying on the face during shaving.

S t a t e m e n t u n d e r A r t i c l e 1 9 (1)

Amendment of patent claims better explains newness of the invention and protects it. Today it is possible to make the shaving foam for needing during shaving the hair only in spray (beyond traditional shaving-brush and soap). Therefore shaving foam sprays in practical package of different sizes with the capacity i.e. 50, 200 as well as 400 ml that are sold as self product in the shops. In accordance to the operating instructions the shaving foam is applied on the wet face with the open hand before shaving.

Connecting combination of modified spray of the shaving foam and adding the cutter block with turning regulator they form compact shaving unit - Shaver SPR of new generation sets in. New construction enables joint use. First before shaving the shaving foam is applied on the wet face moreover without using the open hand but directly by the shaver SPR through the protection cap with cross ribbons and then also newly with using the shaving foam for shaving hair. Variable design enables single or repeated using. The shape of the cutter block could be modified into an attractive design.

Shaver SPR (SPR-speedy, practical, ready) will be desired and practical need for personal hygiene of majority men.
